#### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: Wang et al and Sankaranarayanan et al fail to disclose a method for assigning bits a plurality of the channels in a discrete-multi-tone modulation communication system, comprising: determining an allowable number of bits that can be carried by each of the one or more channels using a signal to noise measurement for each of the one or more channels for a first group of channels in the plurality of channels, wherein the allowable number of bits that can be carried by each channel in the first group of channels is less than a characteristic minimum bit value for channels in the discrete multi-tone modulation communications system, the method further comprising reducing the determined allowable number of bits for each channel in the first group of channels to zero; assigning, to each channel in the plurality of channels, a gain value based upon a performance characteristic and a specified gain limit for each channel in the plurality of channels.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
